

Vintage Leather Flying Helmet

Headset Services Limited manufacture a quality range of leather flying helmets.
Based on the design of the classic 'G' type cloth helmet.

Our standard leather helmet is fitted with noise attenuating ear shells and so offers improved ear protection and clarity of communication over the leather pads fitted to the original G type cloth helmet. The dark brown leather helmet is available with either a soft Chamois leather or short pile wool lining as preferred. The helmets will accept most 'H', 'M' or 'P' type masks used as mic carriers or our clip on boom mic. The helmets are supplied with an 18" cable and UK NATO plug. A variety of extension cables and adaptors are available to suit your aircraft.

Headset Services Limited can also supply oxygen mask mic carriers to complete the package as well as amplifier adaptors to enable the standard military microphones to be used in civilian aircraft.
